

TrpB replication: the LLM-selected skill transfers, and the measured source binding is necessary

A New-family efficacy

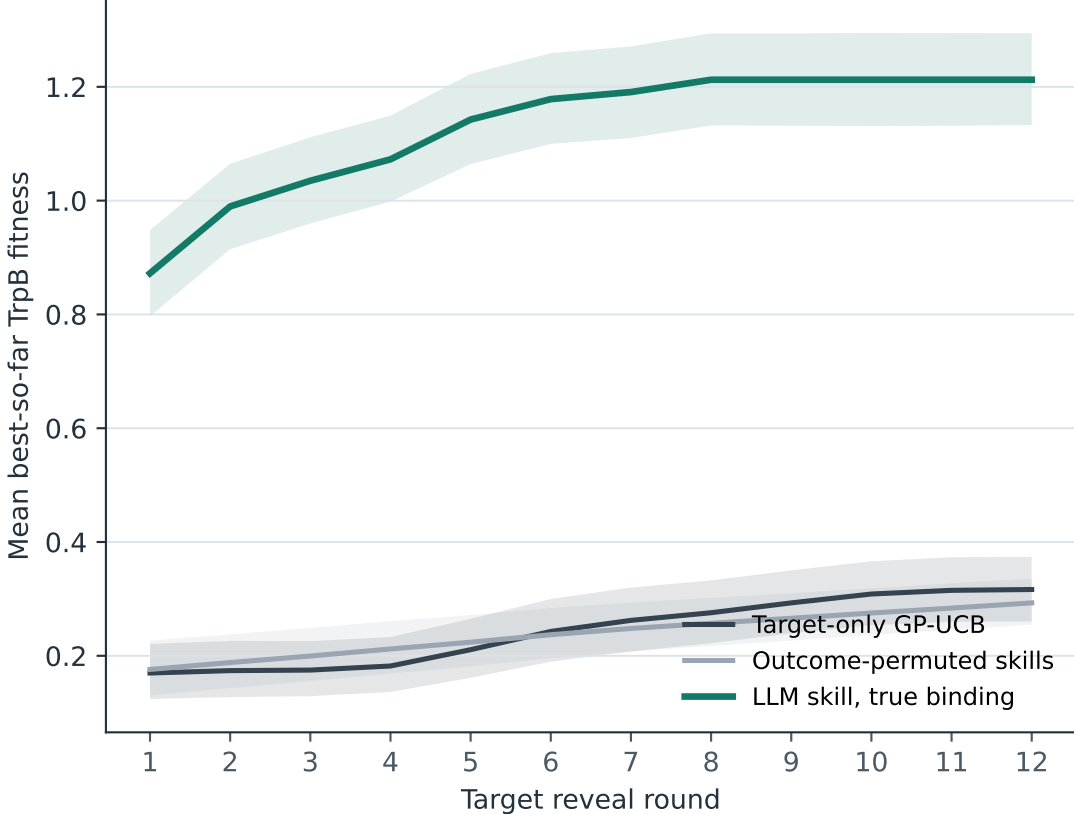

Gate result: HOLD
calibration +0.044 [-0.018, +0.106]
exact token coverage: 0% calibration vs 99.97% deployment

B Prospective mechanism test

C Same budget, different source binding

FLIP2 one-to-many; protocol and LLM hypothesis committed before download; 100 paired target seeds, 3 initial observations + 12 reveals. The frozen gate abstained, so efficacy and routing power are reported separately.
