

Prospective FLIP2 Rhomax confirmation: the gate rejects harmful transfer

Official by-wild-type split. Test outcomes are used only after the frozen gate decision for evaluation.

A. Source-only calibration, then untouched official test

RGPE ICM-BMA Fixed skill prior

Interpretation: prospective negative-transfer prevention on an external protein family; not positive-transfer efficacy and not a wet-lab result.

B. Preregistered decision

Frozen before data download

Protocol + code committed

Eligibility rule

**95% CI lower bound > 0
on both calibration routes**

Ungated choice

Fixed skill prior

Gate decision

**REJECT -> target-only
+1.55 AUC harm avoided**
